*Short-term Goals:

- Develop technical and management skills in the IT field, particularly in software and hardware system maintenance, deployment, and operation within an enterprise.
- Gain more experience in the role of a bridge engineer to improve communication and coordination between parties, especially with international clients.

*Long-term Goals:

- Become an expert in managing and optimizing enterprise IT systems, ensuring stable and efficient operations.
- Obtain advanced certifications in networking, security, or system management to add value to the company.
- Progress to a senior management position in the IT field, with the ability to coordinate and develop teams, while also contributing to the long-term technology strategy of the enterprise.

equipment in the clinic at the District 1 branch: ensure 99% uptime for server systems during working hours, minimize downtime; ensure 100% camera functionality even during power outages, improving overall surveillance efficiency (except during maintenance).

- Deploy computers, servers, and connect ultrasound machines for mobile health check-up teams; synchronize health check-up data between insite and onsite systems: ensure 100% consistency in ultrasound data storage.

- Check the stability of connections between machines in the laboratory system.

- Participate in configuring and installing computer systems at the new District 7 branch (DYM MEDICAL CENTER PHU MY HUNG - 10/2023) and the expansion of the District 1 branch (08/2024): optimizing deployment time and reducing operational costs.

- Manage the installation and operation of printers/copiers, ensuring efficient operation (RICOH, FUJIXEROX, EPSON, BROTHER, CANON...).

- Replace and repair electrical equipment in case of malfunctions.

- Investigate and resolve issues related to application software malfunctions (clinic management software and customer-facing apps).

- Experience working with partners and related software systems, including:

- + Network Providers: Viettel, VNPT.

- + Network, firewall, VPN: Fortinet, Barracuda.

- + Camera Systems: Hikvision, Imou.

- + Virtualization: Hyper-V, Proxmox, VMware vSphere.

- + Wifi: Ruckus, TP-Link, ZTE, Xiaomi, iGate, DrayTek.

- + NAS: Synology.

***Software Deployment and Operation:**

- Deploy PACS (Picture Archiving and Communication System) at 3 branches in District 1, District 7, and Hanoi; assign account permissions for doctors in Ho Chi Minh City: reduce 70% search time, increase scalability and remote work capabilities; minimize X-ray film printing costs, increase profit by 15%.

- Deploy and train company departments to use clinic software (create accounts for staff, doctors, and assign permissions): enhance productivity for the medical and administrative teams.
- Write user guides for software features for different departments.
- Support data migration for Japanese clients' health check-up data from the old software to the new one, and implement data entry templates: reduce 80% of medical reporting time, reduce data entry errors by 90%.
- Implement and install a fingerprint and RFID time attendance system: control staff access to the clinic.
- Write micro-scripts to process electrocardiogram (ECG) files, standardize names for uploading to the software: reduce 50% of manual errors, save 25 minutes daily.
- Build a headless CMS (Strapi) to support posting articles and news to the mobile app.
- Deploy landing pages on the IIS server and use subdomains for running ads (<https://tamsoatungthuvu.dymmedicalcenter.com.vn/>).

***Technical Support and IT Resource Management:**

- Obtain quotations, purchase, and sell equipment, computers, and office supplies related to clinic operations.
 - Manage the allocation and retrieval of IT resources, including 60 computers, 70 emails (Google Admin), VOIP PBX (40 internal phone numbers), and SMS Brandname (WorldSMS), ensuring transparent processes and preventing asset loss.
 - Manage the allocation, retrieval, and permission settings for file share directories on the Windows Server domain, ensuring appropriate access for each department.
 - Create health check-up packages and update employee lists in the health check-up software.
 - Implement automated messaging and email systems, improving the speed of result delivery by 15%, enhancing customer satisfaction.
 - Guide and manage tasks for new team members: improve the performance of the IT team.
